

Fiction or Reality:

Why the Human Digestive System is not compatible with Meat Eating?

Why the Human Reproduction System is no compatible with Homo-Sexuality?

1. Why the Human Digestive System is not compatible with meat eating?

Physiologically, the human digestive system is not compatible with eating meat, even clean kosher meat without blood and fat. Here are a few valid reasons why:

- The digestive system originates with the mouth. Human beings, contrary to carnivores, do not have the teeth to chew animal meat.
- While it takes 12 to 20 hours to digest and eliminate the residue of fruits and vegetables, meat remains in the body as long as 48 hours, which causes putrefaction and decay and produce cancer and other diseases of the colon. The intestines of the carnivores are shorter than the intestines of human beings.
- The proteins of the meat have an acidic pH (below 7) while the proteins of nuts and beans have an alkaline pH (above 7). For the body to be healthy, it must have an alkaline pH (above 7) when testing blood or urine.
- It is a known fact that many animal meats are boosted with antibiotics, hormones and steroids. Morbid Obesity is now rampant with the younger generation and these chemicals fed to the animals are absorbed by the human bodies and react differently from one person to another.

Steroids are given to enhance rapid growth of the animals and are not eliminated by the animal digestive system before being butchered since it has entered their muscles, tissues, and organs. This meat is served to human beings who in turn absorb these steroids and causes enhance rapid growth of the glands, muscles, tissues to the stage of morbid obesity plaguing the youth, young adults of today and even the older generation who consume this degenerated man-made boosted animal meat. Fast food with its fake meat and fat is a contributing factor to these incredible deformed human bodies we see everywhere today, even in nations that were predominantly slim and fit like America or Europe before the 1970's.

2. Why the Human Reproductive System is not compatible with Homo-Sexuality?

Physiologically, the human reproductive system is not compatible with the practice of homosexuality (male with male or female with female reproduction systems). Here are a few valid reasons why:

- **MALE SEMINAL FLUID:** A short lesson of anatomy and physiology
"Reproduction is the mechanism by which the thread of life is sustained. In one sense, reproduction is the process by which a single cell duplicates its genetic material, allowing an organism to grow and repair itself; thus, reproduction maintains the life of the individual. But

reproduction is also the process by which genetic material is passed from generation to generation. In this regard, reproduction maintains the continuation of the species

The male seminal fluid is a mixture of sperm and secretion of the seminal vesicles, prostate gland, and bulbourethral glands. The average volume of semen for each ejaculation range is 2.5 to 5 ml, and the average range of spermatozoa ejaculated is 50 to 150 million/ml. When the number of spermatozoa falls below 20 million/ml, the male is likely to be infertile.

Semen has a slightly alkaline pH of 7.20 to 7.60. The prostatic secretion gives semen a milky appearance and fluids from the seminal vesicles and bulbourethral glands give it a mucoid consistency {mucus like}. Semen provides spermatozoa with a transportation medium and nutrients. It neutralizes the acid environment of the male urethra and the female vagina. It also contains enzymes that activate sperm after ejaculation.

SEMENAL FLUID CONTAINS AN ANTIBIOTIC

Semen contains an antibiotic, seminalplasmin that has the ability to destroy a number of bacteria. Since both semen and the lower female reproductive tract contain bacteria, the antibiotic activity of seminalplasmin may keep these bacteria under control to help ensure fertilization.

Once ejaculated into the vagina liquid semen coagulates rapidly because of a clotting enzyme produced by the prostate gland that acts on a substance produced by the seminal vesicle. This clot liquefies in about 5 to 20 minutes because of another enzyme produced by the prostate gland. Abnormal or delayed liquefaction of coagulated semen may cause complete or partial immobilization of spermatozoa, thus inhibiting their movement through the cervix of the uterus."

WOMEN'S MENSTRUAL FLOW

The vagina serves as a passageway for spermatozoa and the menstrual flow. It is also the receptacle for sexual intercourse, and the lower portion of the birth canal. The mucosa of the vagina contains large amount of glycogen, which upon decomposition produces organic acids. These acids create a low pH environment that retards microbial growth. However, the acidity is also injurious to sperm cells. Semen neutralizes the acidity of the vagina to ensure survival of the sperm."

Principles of Anatomy and Physiology, Harper Collins Publishers, p. 890, 891, 905, 906.

Conclusion:

After reading these principles of anatomy and physiology of the reproduction system, it is possible to prove why physiologically, the human reproductive system is not compatible with the practice of homo-sexuality (male with male or female with female reproduction systems). When sexuality is practice any other way but the one intended by the Maker of the male and female reproduction systems, bacteria can cause major damages to the respiratory, digestive or urinary systems when sexuality is practiced orally or anally by two identical partners. The

chemical reaction of the antibiotic seminalplasmin is produced by an alkaline and acidic environment. It cannot be produced by an alkaline environment only (male with male).

While the seminalplasmin is only produced by the male seminal fluid, the lower female reproductive tract containing bacteria which remains a negative factor in the practice of sexuality involving dual acidic environment in the case of female with female sexuality.

The commands of Leviticus 18:22, 23 have a dual application to protect human reproduction and health which transcends all human legislation of permitting same-sex marriage based on human rights. The moral reason behind these commands is amplified in the light of the physiological reason offered by the Maker of the reproductive system who knows what is best for the utmost protection and reproduction of mankind. The command extends to bestiality for the same bacterial physiological reasons combined with moral values.

Therefore, the practices of homosexuality, lesbianism and bestiality are really a physiological and moral genocide or destruction of the human species.

“Thou shall not lie with mankind, as with womankind, it is abomination. Neither shalt thou lie with any beast to defile thyself therewith: neither shall any woman stand before a beast to lie down thereto, it is confusion. Defile not ye yourselves in any of these things for in all these the nations are defiled which I cast out before you and the land is defiled.” Leviticus 22-25.

Obviously, the practices of homosexuality and bestiality are not new practices since the Torah mentions them in the Statutes. And the consequences sanctioned against the heathen nations around Israel at that time have not changed either:

“Therefore I do visit the iniquity thereof upon it, and the land vomited out her inhabitants.” Leviticus 22:25.

Canada, USA, Europe, Australia and all the countries who have legislated same-sex marriage must prepared themselves for the consequences of their legislative decision and the citizens of these nations who have stood by, not speaking a word against these abominations: the land of these countries is ready to vomit its inhabitants by wars, famines, pestilences, captivity (terrorist attacks) and death. For the Maker has spoken it.
